A simple abstract

I. INTRODUCTION

Intro with a range using SI units $10^{-4} - 10^{-1}$ Hz. A citation Ref. [1]. A direct citation [2]. Multiple citations together [2, 3].

The paper is organized as follows. In Sec. I, we do such and such. Finally, in Sec. II we discuss the implications. Another type of citation [2].

Another citation approach in Korol *et al.* [3] Some dimensionful quantities 3 kpc. Some other 13.5 Gyr. Another citation style [e.g., 3]. Another quantity with scale factor $8.2 \times 10^{10} M_{\odot}$. A pure number 26×10^6 .

$$\dot{f} = \frac{96\pi^{8/3}}{5c^5} (G\mathcal{M}_c)^{5/3} f^{11/3}, \quad (1)$$

A percentage 1% and some dimensionful ranges $f > 2 - 3$ mHz or $f < 2 - 3$ mHz.

II. METHODOLOGY

ACKNOWLEDGMENTS

The authors are grateful to ... for valuable inputs. R.B. acknowledges support through the Italian Space Agency grant *Phase A activity for LISA mission, n. 2017-29-H.0*. Computational work was performed using University of Birmingham BlueBEAR High Performance Computing facility and CINECA with allocations through INFN, Bicocca, and ISCRA project HP10BEQ9JB.

Software: We acknowledge usage of MATHEMATICA [4] and of the following PYTHON [5] packages for modeling, analysis, post-processing, and production of results throughout: MATPLOTLIB [6].
